A13 Upgrade

Neck Read Light

[Upgraded Innovative Design] Breakthrough refinements based on our customer feedback from the first generation neck book light. In comparison with the previous one, this neck light narrowed the width of the neck area to fit your neck more comfortably and get more steady, extended the length of the 2 flexible arms for easier operation and to hold the position more stable, reduced the weight to reduce your fatigue after long time reading and knitting. Perfect for book lovers and knitters.

[Upgraded Functions] We added thoughtful and practical functions according to the voices of our loyal customers. Unlike other neck lights, which need you to press a button at least 3 times for on/off, this neck light only needs one press. Long pressing the power button to turn on a timer for automatic power off after 30 minutes saves your hassles to turning it off when your eyelids are fighting during your reading in bed. Plus, 3 power indicators on the top to inform you how much power is left

[3 Color & 3 Brightness Dimmable] 3 color modes: yellow(1800K) for eye-caring and boosting your melanin when reading in bed; warm white(3400K) for general reading; cool white(6000K) for focus reading. One button on the one arm controls power of advanced LED beads for both heads and a 30-min timer. 2 buttons on the other arm are responsible for color and brightness adjustment respectively. No harsh light, no flickering, blue light filtered and no more eye strain for seniors, adults & kids.

[Rechargeable & Long Lasting] It is USB-C fast and safe rechargeable. Up to 80 hours of powerful, non-diminishing brightness from the included premium rechargeable 1000mAh battery. After a charge, you can enjoy your reading for at least 20 days if you read 30 minutes every day, even at the brightest level. A special narrow beam angle(90°) design can concentrate enough light on the area you positioned while dim enough not to disturb your sound asleep partner.
