Camping Lantern

[Survival Level Design] This camping lantern was designed for extreme weather & tough environments: 1. The IP68 waterproof level makes it work under 1.5-meter water; 2. It was proven to be durable in repeated military-level drop tests from 40-inch; 3. It offers exceptional visibility in thick fogs with anti-fog mode, ensuring clear visibility in adverse weather; 4. The SOS mode can be attention-grabbing when in danger. Perfect emergency light for power outage and tough outdoor activities.

[Ultra Bright 1200LM & 5 Brightness Levels] With 106 evenly distributed LEDs covering the entire camping lantern body in 360 degrees, it illuminates your surroundings with exceptional brightness and uniformity, eliminating any shadows for clearer views. 5 brightness dimmable for your various lighting needs. In emergencies, the "ultra bright" mode emits 1200LM for 3-min to cover a wider area. Essential lanterns for the darkest & stormiest nights.

[3 Light Modes & SOS Mode] We design this lantern with 4 light modes to suit your needs, including 3000K, 4000K, 6000K & SOS mode. Specifically, the 3000K is mainly for lighting in the thick fog; the 4000K is for walking or hiking; the 6000K is for repairing or illuminating a broader area like a tent or campsite. Additionally, the SOS mode can be attention-grabbing when in danger. Customize your camping light to better suit your surroundings.

[Rechargeable & Long Lasting] The camping light is rechargeable, means no more battery waste. The modern USB-C port is not only faster and safer, but allows to be charged from small solar or typical plug-in portable power banks when away from your car or home. The built-in 5000mAh battery can last 80 hrs runtime for your heavy use, making it powerful enough for a solid weekend camping trip or for power outages caused by hurricanes & storms - a powerful lantern for all your lighting needs.

[Small Size & Lightweight] This lantern is a mighty powerhouse, yet it is small in size and lightweight. At a mere 2.2 x 2.2 x 5.6 inches, it is even more compact than a 330ml soda can. Weighing in at a mere 8.5 ounces, the lantern is lighter than a 250ml bottle of water. Its diminutive size makes it an ideal addition to your hiking backpack, especially when every inch and every ounce counts. Don't hesitate to get this small yet powerful LED lantern for emergencies.
