

Downlighter fire rated sleeves to make existing and new downlighter fittings into fire rated fittings.

This downlighter sleeve is a lightweight metal unit containing intumescent material that expands in a fire, holding the unit in place and sealing the hole in the ceiling structure, thus preventing fire and smoke penetration and maintaining the fire rating of the ceiling/floor.

IDR downlighter sleeve is designed to fire rate existing and new installation of downlighter, according to document B of building regulations.

This cover is easy to install and provides over 60 minutes fire protection.
