

The Kilter I bulb is defined by its tubular shape and consistent light throw which reduces shadowed endpoints common in other S14d light sources. Offering Tala's signature dimming characteristics, the internal filament is subtly exposed to celebrate the function of the bulb, while the soft-frosted finish enhances the aesthetic of the bulb when turned on or off.

Available in two colour temperatures - 2200K or 2700K - for functional and ambient lighting options.
