

Light Engine I is the smallest light source in the range. Fitted with a standard E14 base cap, this product is ideally suited to small, decorative fixtures, including table lamps, floor lamps and chandeliers.

Light Engine is a range of high-performance functional light sources designed to improve upon the characteristics that halogen is revered for.

Powerful in output but compact in form, its Dim to Warm technology enables a smooth transition between 2200-2700K, while maintaining its excellent colour rendering with minimal heat emission.
