

Light Engine III is the largest light source in the range. Fitted with a standard E27 base cap, this product is suitable for a variety of large diffusion fixtures.

Light Engine is a range of high-performance functional light sources designed to improve upon the characteristics that halogen is revered for.

Powerful in output but compact in form, its Dim to Warm technology enables a smooth transition between 2200-2700K, while maintaining its excellent colour rendering with minimal heat emission.
