

Porte Table

Superlites

Porte stands out as a high performance portable luminaire, designed for both indoor and outdoor use (IP43). It offers the convenience of dimming the luminous flux in three levels and adjusting the colour temperature by means of a push button integrated in the head.

Porte immerses us in a playful world by fusing fresh colours, bright finishes and clean shapes. The harmonious connection between the head and the base, crossed by a delicate stem, reflects balance and mobility. This head, as an independent main element, is combined with various supports to allow four types of installation and adaptations, thus satisfying any need.
